

# Find the Right ODORCIDE® Products For Your Clinic

Each area of your clinic has unique odor challenges.  
Choose an odor zone below to find the specific products that will work for you.

## Animal Zone

**This zone covers areas like kennels, grooming rooms, dog wards, and cat wards.** Here, common odors from feces, urine, and vomit can be strong. Effectively managing these odors is key to ensuring your patients go home feeling their best.

## Staff Zone

**This zone includes the lab, laundry, conference room, pack/scrub, and treatment areas.** Working to help pets live long and healthy lives is rewarding, but dealing with persistent animal-related odors is a drawback. Tackle odors in the Staff Zone to make your daily environment as positive as the results you help create.

## Pet Owner Zone

**This zone covers areas like the lobby, waiting room, bathroom, and exam rooms. It also includes your clients' homes.** Address odors effectively to keep client retention high and negative perceptions low. All ODORCIDE® products are safe for home use, so you can sell them to help you clients maintain an odor-free environment in their home!
